START THE CONVERSATION

Do you find that your current cooktop makes it hard to maintain consistent temperatures for dishes like sauces, searing, or melting chocolate?

TOP FEATURES

1

TEMP COOK™ INDUCTION TECHNOLOGY

Lets you set an exact temperature from 120°F to 400°F for precise control beyond standard high, medium and low settings. Dual sensors in the cooktop help keep your pan from overheating, so you can take on ambitious recipes with delicious results, batch after batch.

2

TEMP COOK™ SMART PRESETS

Set and hold the ideal temperature for popular cooking methods and alert when to add ingredients, so you can perfectly sear salmon, gently simmer sauces and quickly boil water. Use the KitchenAid® App to unlock specialized options like stir fry, melt, chicken cutlets and more.

3

TWO EVEN-HEAT™ ZONES

add versatility to cook with large pans, like griddles, grill pans and braising pans, or two pans at two different temperatures. Unlike traditional round bridge elements with heating gaps, the rectangular zones heat evenly edge-to-edge, so the crepe in the back cooks just as beautifully as the one in the center.

DID YOU KNOW?

Temp Cook™ Induction Technology makes it easy to meet these cooking goals, whether you're cooking delicate dishes or high-heat meals, and ensures consistency and precision throughout the process.

HOW TO DEMONSTRATE

TEMP COOK™ INDUCTION TECHNOLOGY

Tell your customer how Temp Cook™ Induction Technology is great for melting things like chocolate. With this you just set it to 120 F and it stays there, where on a regular cooktop without precise temperatures you might end up with a scorched mess.
